

## PowerFlow™

*Easy, Graphical Workflow for Any Lotus Domino® Application*

Lotus Domino has always been known as an excellent platform for workflow because of its mail integration and application framework. However, developing workflow applications in Domino can be difficult because it requires extensive LotusScript expertise, significant amounts of time and money, and is simply too difficult to maintain. Domino developers require tools that eliminate complex coding and simplify ongoing maintenance as business processes change and employees are reassigned to new projects.

### Introducing PowerFlow

PowerFlow from Axceler delivers robust yet intuitive graphical workflow capabilities to Notes / Domino environments. Unlike other workflow products, PowerFlow allows you to easily add business logic to any Domino application without altering the application's design. And with its graphical interface, PowerFlow eliminates the need for complex LotusScript coding, shortening the initial implementation time. As your business needs evolve, PowerFlow lets you easily implement changes by simply dragging and dropping new steps or conditions into the workflow. PowerFlow offers built-in dynamic process modeling and dynamic person reassignment features to make changes simply and quickly. PowerFlow also reports on business process statistics so that even business users can understand the PowerFlow process diagram to reduce bottlenecks and keep your business running smoothly.

### PowerFlow Features

#### Flexible architecture provides you with workflow options

- Automate any business logic
- Model any role organization
- Add workflow to any existing Domino application without touching the design

#### Workflow Wizards bring intuitive graphical interface

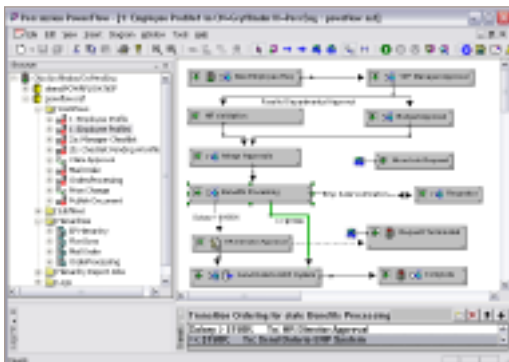

- Easily define the document path and determine information route
- Assign roles to process and specify conditions as appropriate
- Visually structure and determine logical flow of work
- Visually diagram workflows, making them faster to create and edit

#### Reporting to analyze and improve your applications

- Graph results by role, state, person or cycle time.
- Determine if your business is running optimally, if orders were shipped on time, if requests have been approved, etc.
- View complete audit trails
- Quickly change roles and process flow to reflect changes in business structures

### BENEFITS OF POWERFLOW

- Identify and eliminate bottlenecks within your organization
- Shorten development cycles by keeping application logic in a separate, visual format.
- Build, refine and streamline mission critical business processes.
- Improve how key information is routed within your organization.
- Remove frustrating bottlenecks and improve business processes that directly impact your bottom line.
- Save time and expense by eliminating the need for time consuming LotusScript coding

*“PowerFlow provides an exceptional set of tools for designing and managing workflow activities for any application built in Domino. Whether you use the Notes client, browser clients, or both, PowerFlow-enabled workflow can run on your application. No changes to the application are required. You don’t have to add any special agents, forms, or other elements to your design. This makes adding and managing workflow clean.”*

**System Requirements**

The Visual Workbench runs on Windows 2000/2003/XP and requires at least the Notes V5.0.13 client or higher. The PowerFlow Engine supports Notes/Domino Server 5.0.13 and above for Windows 2000/2003/XP.

**Comprehensive Product Portfolio**

ServerAdmin Plus is part of a comprehensive product portfolio that solves real problems for Notes and Domino administrators / developers. Axceler can help you if you are integrating enterprise data into Domino, administering the entire Domino environment, workflow enabling Domino applications, or leveraging rich Domino content with other Web based systems.

**The Axceler difference**

With over 2,000 customers worldwide, Axceler has a long history of providing solutions that enhance productivity and lower costs for a wide range of organizations. By combining our industry expertise with flexible products and dedicated services, Axceler provides practical solutions that enjoy an unparalleled level of customer satisfaction. We invite you to learn more about ServerAdmin Plus and our other award winning products:

- Lyrix™ — Rich Content Integration between Lotus Domino® and non-Domino applications
- Notrix® — Easy Data Integration between Enterprise Applications and Lotus Domino®
- ServerAdmin Plus™ — Comprehensive & Proactive Lotus Notes® and Domino® Administration
